

# REST API Project

# Problem Statement

- UpInTheAir.com has come up with the requirement of developing a web application for booking flights by the customer
- The application should support the following functionalities:
  - Searching for available Flights
  - Booking a Flight
  - View Bookings
- You need to develop the backend APIs for the above functionalities

# Pointers

- The following technologies should be used for developing this application:
  - JAX-RS
  - Spring Boot
  - Hibernate/JPA
- The backend APIs should be tested using Postman to verify the working of it

All the Best!
