# Online Car Rental Booking System

Problem Statement:

Make a portal for booking cars on rental basis. This portal must be built using the following technologies and languages:

- HTML 5
- CSS 3
- Bootstrap 5
- Angular 12
- Karma

The landing page or home page should look like the following image:

After entering the location and date the user clicks "Search Cars" button which navigates to the next screen as shown in the below image:

All filters should work as per the title.
User should click on "Select" button to select the car and then click on "Book" button to book the car.

The confirmation of booking should be displayed in a popup which should remain visible for 15 seconds.
All functionality should be tested using "Karma" test runner.
